INDEX TO VOLUME V.

GEOMETRY OF TWO DIMENSIONS.

Page

Problem respecting polygons in a plane. By *Robert Moon*. . 131
Notes on the preceding paper. By *William Thomson* . 137
Extension of the word *Area*. By *Professor De Morgan* . . 139
Note on a family of curves of the fourth order. By *Arthur Cayley* 148
Analytical theorem concerning polygons. By *W. Walton* . 182
On the complete hexagon inscribed in a conic section. By the *Rev. Thomas P. Kirkman* 185

GEOMETRY OF THREE DIMENSIONS.

On curves of double curvature and developable surfaces. By *Arthur Cayley* 18
On the classification of curves of double curvature. By the *Rev. George Salmon* 23
On the developable surfaces which arise from two surfaces of the second order. By *Arthur Cayley* . . . 46
On the theorems in space analogous to those of Pascal and Brianchon in a plane.—Part II. By *Thomas Weddle* . . . 58
On the bifocal chords of surfaces of the second order. By *John Y. Rutledge* 69
Analytical demonstration of a theorem in Carnot's 'théorie des transversales.' By *William Walton* 91
On certain properties of surfaces of the second order. By *J. Y. Rutledge* 110
On the developable derived from an equation of the fifth order. By *Arthur Cayley* 152
On the general equations of geodesic lines and lines of curvature on surfaces. By *Benjamin Dickson* 166
Theorem on the quadrature of surfaces. By the *Rev. John H. Jellett* 176
On a theorem in confocal surfaces of the second order. By *Richard Townsend* 177
On the relations which exist in certain systems of points and planes, including the relation between ten points in a surface of the second degree. By *Thomas Weddle* 226
On the intersections, contacts, and other correlations of two conics expressed by indeterminate coordinates. By *J. J. Sylvester* . 262
Reduction of the general equation of the second degree . . 286

ALGEBRA AND TRIGONOMETRY.

Page

On the meaning of the equation $U^2 = V^2$ when U and V are products of n linear functions of two variables. By the *Rev. T. P. Kirkman* 97

On the conditions that an equation should have equal roots. By the *Rev. George Salmon* 159

On a theorem in Mr. Hearn's paper (vol. IV. p. 265) . . . 179

Propositions in the theory of numbers. By the *Rev. Arthur Thacker* 243

Note on an unanswered prize question. By the *Rev. Thomas P. Kirkman* 255

DIFFERENTIAL AND INTEGRAL CALCULUS.

On certain theorems in the calculus of operations. By *W. F. Donkin* 10

Théorèmes sur l'intégration de l'equation

$$\frac{d^2y}{dx^2} + \frac{r}{x}\frac{dy}{dx} = \left(bx^m + \frac{s}{x^2}\right)y.$$

Par *C. J. Malmstén* 180

Notes on elliptic functions (from Jacobi). Translated by *Arthur Cayley* 201

On the transformation of an elliptic integral. By *Arthur Cayley* . 204

On general differentiation.—Part III. By the *Rev. W. Center* . 206

Zur theorie der convergens der kettenbrüche. By *C. J. Malmstén* 282

MECHANICS.

Notes on molecular mechanics—

I. On the general equations of motion. By the *Rev. S. Haughton* 172

On the attraction of ellipsoids (Jacobi's method). By *Arthur Cayley* 217

Demonstration of certain propositions in the eleventh section of Newton's Principia. By *W. Walton* 284

HEAT, ELECTRICITY, AND ELECTRO-MAGNETISM.

On the mathematical theory of electricity in equilibrium—

VI.—Geometrical investigations regarding spherical conductors. By *William Thomson* 1

On the potential of a closed galvanic circuit of any form. By *William Thomson* 142

Theoretical considerations on the effect of pressure in lowering the freezing point of water. By *James Thomson* . . 248

Notes and other passages enclosed in brackets [ ], are insertions made by the Editor.

The date of actual publication of any article, or portion of an article, may be found by referring to the first page of the sheet in which it is contained. The Author's private date is frequently given at the end of an article.—Ed.
